

Math Circle 10/8/2016 Meeting: Challenge of the week

Make sure that your solution is correct, complete, and clearly written. You should not expect much credit if your proof refers to a false statement, or even if all your statements are true but you forgot to tell us "why?" It is one of the purposes of the Circle to help you improve your "essay-proof" writing style as well as your logical skills.

Please remember that the Challenge is **individual**. Although we strongly encourage cooperation and help among the participants of the Circle, the Weekly Challenge will be one exception to this rule: you may consult your notes, but you may not ask other people to help you.

Problem 3. Suppose points A and B, and a circle with diameter PQ are positioned as in the figure below. Using only a pencil and a straightedge, construct a perpendicular from A onto PQ and from B onto the continuation of PQ.
